Welcome Peter Oram!

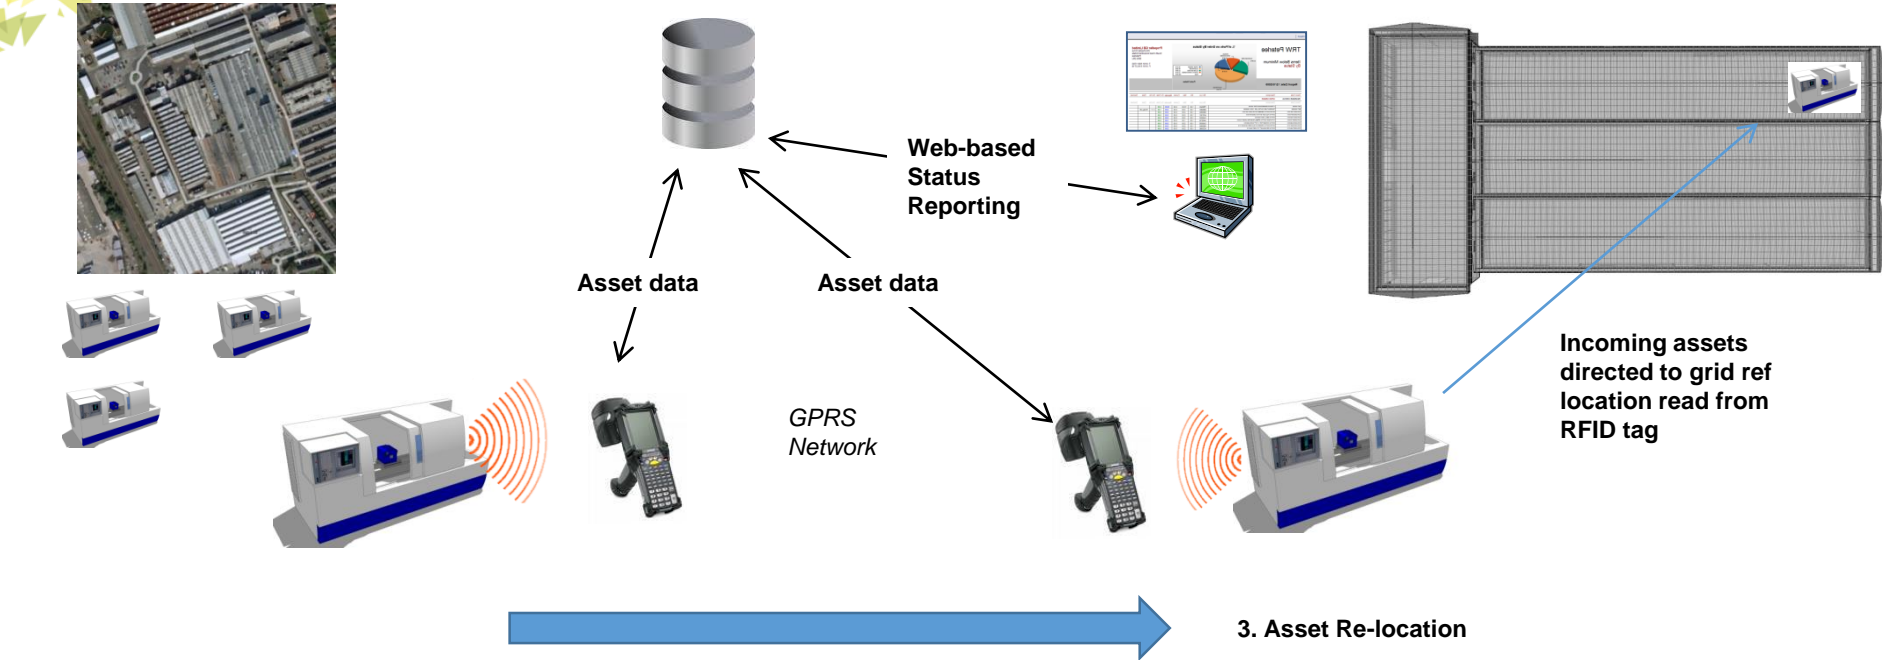

North East Critical Spares Control

Injection Moulding Manufacturers

A view to holding critical spares locally as it seems to be an ever increasing battle, especially for some of the older machines where manufacturer support is no longer offered -

- I. Controlled Stock
- II. Ringfenced for Injection Moulding Group
- III. Complete Visibility to members and suppliers with live stock availability
- IV. Group aggregated collective pricing available (One price fits all)
- V. Commonise spares wherever possible
- VI. Reduction in up front capital & overall cost of procurement

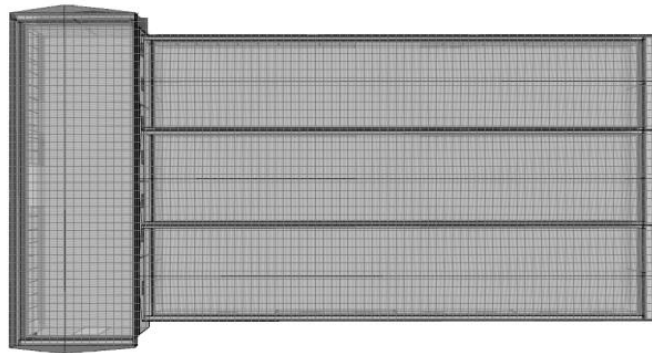

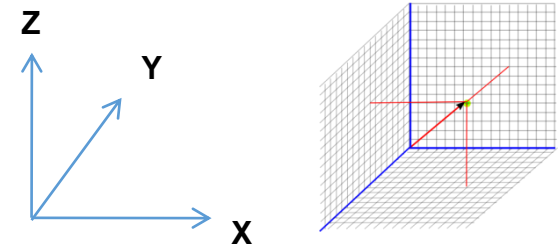

Asset Transfer Management – Time Saving!

Asset Transfer Management – Time Saving!

24 bit RFID tag encoding provides the capability to utilise a 3D, multi-level grid reference location on site.

This can be utilised to identify and utilise locations on multiple floor levels in the building and within the building / site structure.

AVAILABLE RFID TAG TYPES

STANDARD RFID TAG

This tag is available in any size to suit different requirements. The design can be customised and with advanced technology, it has an impressive RFID scanning range and has a long lifespan.

TAG (METAL)

If RFID tags are placed on a metal substance, it can often interfere with the frequency. Specialist technology enables this tag to work on metal assets.

EXTREME RFID TAG

This is the option if a tag is needed to withstand extreme pressures and temperatures typically found in manufacturing and industrial processes.

TAG (SURFACE SPECIFIC)

Works just like the standard tag but due to its advanced and flexible coating, it can work with the more unusual surface types.

PALLET RFID TAG

An RFID tag designed specifically for use on wood pallets and crates. The adhesive has been specifically formulated to work on wood.

DISCREET RFID TAG

This type of tag can be hidden on the item to be tracked. Ideal for the prevention of theft.

evolution

Asset Control Value Map

- ▶ Complete control & visibility across multiple sites 24/7
- ▶ Ability to locate everything you've ever misplaced or lost
- ▶ Improved employee productivity / reduced downtime
- ▶ Direct & Indirect cost savings
- ▶ Mitigate risk, theft & loss
- ▶ Compliance with corporate governance / Insurance
